1. Create Increment decrement state change by button click?

Ans. App.js

```
import React, {useState} from "react";

function App() {

  //Increment decrement function

  const [count, setCount] = useState(0);

  return (

    <>

    <div className="container my-5">

     <div className="card text-center my-5">

       <div className="card-body">

          <h1>Counter app</h1>

          <div className="my-5">
```

```jsx
      <h2 className="my-5">{count}</h2>

      {/* button start */}

      <button className="btn btn-success mx-3" onClick={() =>
setCount(count + 1)}>Increment</button>

      <button className="btn btn-danger mx-3" onClick={() =>
setCount(count - 1)} disabled={count === 0}>Decrement</button>

      <button className="btn btn-secondary mx-3" onClick={()
=> setCount(0)} disabled={count === 0}>Reset</button>

      {/* button end */}

    </div>

  </div>

 </div>

 </div>

 </>

 );

}
```

```
export default App;
```

Output.
